

Material-Free Statement

Weaver and Company takes great pride in the quality of raw materials used to manufacture our medical devices, Ten20® Conductive Paste and Nuprep® Skin Prep Gel. Our goal is putting the health and safety of you, our customers, first. With this goal in mind, please see the following list of raw materials and by-products which are **NOT** used in our products:

- Latex
- Gluten
- Peanut
- Dairy or Egg
- Animal by-products
- Human Cells or Tissue
- Shellfish or Fish by-products

Though this list is not intended to be an extensive list of ALL ingredients that cause concern, these are the most common material questions our customers ask. A complete list of materials, or further details, can be found in the Safety Data Sheet and Instructions-For-Use leaflet for each product.
